

Payment Cash Checking Overview

Cardinal's payment cash checking process ensures that all payments, including vouchers, employee expenses, and cash advances, are checked against available cash before being released for payment each night.

The payment cash checking process runs in the nightly batch schedule after the pay cycle selection process, but before the pay cycle creation process. The process helps to make sure all payments have available cash in the respective Business Unit (agency)/Fund combinations being paid that night. Based on system priority, payments are bounced against the applicable ACTUALS ledger cash account balances, and a running total is kept until all payments are cleared or marked for insufficient funds.

The payment cash checking process utilizes several system configuration settings to provide some flexibility in how the payment requests are analyzed by the system.

For more detailed information about payment cash checking, see the job aid entitled **SW AP312: Payment Cash Checking – Overview** located on the Cardinal website in **Job Aids** under **Training**.

Transaction Level Override Overview

Select users from the Department of Accounts will have security to specify Transaction Level Override configuration. This functionality allows for selected payment transactions to override the payment cash checking process when the cash balances are not adequate to cover the payment. This means that even if the cash goes negative, these transactions pass through the cash checking process and are paid. These transactions are deducted from the running cash balances.
